

REIMAGINING PLASTIC

Shaping ideas

About us

Precision is a Dubai-based large scale manufacturing company catering to a discerning clientele across the Middle East. Established as a small engineering company in 1984, the company has grown from strength to strength, and today, is one of the most sought after organisations in the Middle East for rigid plastic packaging, moulds, and a range of dies for aluminium extrusion.

Precision is jointly owned by three of the most trusted corporations in the UAE - **Al Tayer**, **ARMS** and **DULSCO**. Backed by over 800 employees working across two state-of-the-art facilities, Precision caters to over two dozen of the UAE's leading brands, with innovative industrial solutions.

Precision Packaging Division - experts in rigid plastic packaging solutions

At Precision Plastics Division, we offer innovative rigid plastic packaging solutions across diverse sectors - airlines, beverages, dairy, personal care, pharmaceuticals and more. With over three decades of experience in rigid plastic packaging, we offer our clients unique products of the highest quality, and innovative solutions.

Our Products

Our products set themselves apart with their functionality, safety, and thoughtful design. Each of our products is highly durable, environment-friendly and user-friendly too.

Food and Beverage

The F&B industry has exceptionally high quality standards, with good reason. We bring shelf appeal and product protection to most global brands. Not surprisingly, our packaging for dairy, confectionary, ice-cream, yogurt, eggs, edible oils and baked goods are found on supermarket shelves across the length and breadth of the region.

Personal and Home

Packaging that is appealing to the eye and to the touch is important in the personal and home industry. The shape, function, and design of closures and bottles are key factors that give our clients an edge over the competition. It takes unique and customised designs to preserve the chemical composition and fragrance of products in this category.

Catering

Exceptional quality, ease of use and prompt delivery are essential for the catering industry, for whom we manufacture thermoformed and injection moulded glasses, swizzle sticks, spoons and lids.

Others

Our product portfolio includes secure, durable and customised jerry cans and closures for the lubricant industry, engine oil, antifreeze and distilled water, number plate holders, and display trays.

Since safety is of utmost importance in the lube and chemical industry, we ensure that all our jerry cans and closures fulfill international quality and safety standards, even in large-batch production. Our sophisticated manufacturing processes, constant quality assurance, and production monitoring guarantee the highest level of reliability in the production of our bottles and closures.

Technology

We use world-class technology to offer innovative solutions to our customers. Our CMM machines inspect products to ensure 100% precise results. What's more, we continually invest in the latest technology to remain at the forefront of automation and overall capabilities.

At Precision, we believe in technological versatility, ensuring that our clients, both domestic as well as international, receive accurate advice ideally tailored to their individual plastic packaging needs.

Injection moulding

Precision uses state-of-the-art micro-processor controlled injection moulding machines from world-renowned companies and offers advanced solutions like cube technology, two component moulding, in-mould closing, and robot-assist to successfully meet customer requirements.

Blow moulding

We produce bottles in HDPE, PP and PVC materials with volumes ranging from 50 ml to 10 litres. We use blow moulding machines with double station / multiple-head to meet high quantity requirements. In addition advance multi-point parison control systems and leak detectors are also installed to ensure consistent product quality.

PET

Precision employs single stage technology for production of PET bottles to cater to the varying quantity requirements of our clients. Our high clarity PET bottles are used to pack all types of beverages, including juice and dairy products. The fill volumes range from 100 ml to 2 litres.

Thermoforming

Precision's thermoforming facility predominantly caters to the production of polystyrene cups, lids and trays for multiple purposes, including packaging of juices, dairy products, eggs and bakery items.

Printing and Labelling

Our printing division can undertake cup and tub printing and handle print combinations of up to 6 colours. We also offer exclusive services like shrink sleeve labelling of bottles, heat transfer labelling, labelling of tubs and lids.

Quality

At Precision, we abide by the ISO 9001:2008 quality assurance standards, which we look upon as the backbone of our operation. We have a quality management system to ensure that only high quality products are passed on to our clients. We ensure that every stage of the process is carefully monitored - from design to programme, manufacture to final shipment.

Our Strengths

One stop shop

- Partners from concept inception to realisation.
- Bespoke design and engineering services.

Peace of mind

- Local production and uninterrupted delivery.
- Quality track record - products and services.

Service assured

- Responsive sales service.
- Flexible supply chain and delivery.

Loyal local partner

- Top level MNC and GCC network.
- Long term vision.

Brand recognition

- Over 30 years as the plastic specialist in the GCC.
- High quality engineering and tooling capabilities.
